

FLUORIDE CONSENT

Fluoride varnish can help to prevent cavities (tooth decay), remineralize teeth and strengthen teeth. It is being offered as a preventive service at your visit today. The varnish is “painted” onto the teeth by a qualified health care professional.

We recommend that fluoride can be applied at every 6 month dental check-up and always ask for interest and permission. As with any service, any balance (like amount not covered by insurance) is the responsibility of the patient (or parents/guardian).

This form is to acknowledge that we have explained to you the benefits & the possible out of pocket costs for the fluoride varnish. Please check one of the following:

_____ **YES** I do want to receive the fluoride varnish application.
